### **Confidentiality and ethics**

The names of firms where we have realized projects will not be mentioned in this newsletter.

**AUGER GROUPE CONSEIL INC.**  
*Génie industriel / Industrial engineering*

Le bulletin *InfoAuger* est publié 4 fois par année.

## **Evolution - Sage**

For several years now our firm has been solicited to collaborate in programs for continuous improvement for our multinational customers.

These programs, well developed and structured, permit the undertaking of an organized approach towards excellence. The precision and pertinence of the objectives targeted, the culture of improvement put forward and the structure of the programs creates a reassuring culture for the mobilization of the organization's human resources. The results are in large part favourable for everybody, as much for the firm, as the people in it and their customers. Auger Groupe Conseil with their eternal desire to help firms surpass themselves, have developed a program for continuous improvement that is simple, but also efficient. With our vast experience, we have given birth to a platform for continuous improvement that respects the fundamental values of the firm (**Quality-Cost-Delay**), all while consolidating the durability of the undertaking by our "Concept d'Entreprise à Productivité Durable" (CEPD).

This program called "Évolution-Sage" has as primary objective the involvement of manpower, strengthens the internal and external customer supplier relationship, clearly positions the role for each of the firms teams, the product, the equipment, the customers, the operation support groups and other resources of the firm.

This program of continuous improvement has been developed in collaboration with M. Denis Lagacé of Technologies Denis Lagacé, professor at the l'Université du Québec à Trois-Rivières, to answer precisely to the needs and expectations of industry.

## **ERP software**

Desirous to offer a solution to computerized management of production resources, we have recently been distributing the follow-up of **Orchestra for SME software**. This is made up of an *ERP* type software that is high performance and also offers software for forecasting sales, accounting and payroll. Lately software for product configuration, which permits acceleration of preparation for tenders and orders while reducing the chance for errors, has been added to the package.

Evidently, The *ERP* software is the main attraction of the package and includes the functionality and sophistication of software which is much more expensive all while conserving a great simplicity of utilization. It should be noted that the planning and production authorization module by itself is worth the price off the software.

In use by firms for several years, **Orchestra for SME** is solidly supported by a model of management and controls that is taught in schools for manufacturing management throughout the world. It also offers a modular structure permitting the firm to choose a gradual implantation based on their particular needs.
