

Maintenance Diagnosis

Poorly maintained assets can have disastrous consequences on delivery time, manufacturing costs, product quality and more. Indeed, deficient maintenance management often leads to a spiraling growth of maintenance costs and a deterioration of operation productivity. These symptoms are quite often the result of inexistent or inefficient maintenance management elements.

Auger Groupe Conseil's team will help you identify improvement opportunities in your system and then implement them. Our experts compare all your system's functionalities with maintenance best practices:

Organizational structure

Roles and responsibilities

Management indicators

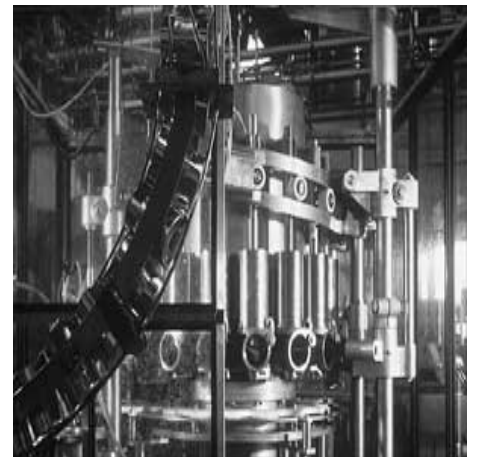

Asset management

Management of the maintenance cycle:

- Task identification
- Planning
- Scheduling
- Execution
- Follow-up

Failure analysis

Performance analysis

This analysis allows us to deliver a clear and efficient action plan. Our maintenance experts will then help you implement the recommendations so you can reach your goals.

If your maintenance costs are on the rise, your productivity is slowed due to equipment failure or your maintenance team spends more time on urgent repairs than preventive maintenance, then Auger Groupe Conseil's Maintenance Diagnosis will allow you to understand the root causes and discover the actions required to reach your goals.

Auger Groupe Conseil has acquired its expertise through many years of working in with clients recognized for their maintenance systems. For each project, our firm assigns an expert manager who has worked with systems that follow maintenance best practices.
