Plant Layout

A facility layout project carried out by a team of people from different sectors of the company ensures employee involvement and decreases resistance to change. By valuing creativity, new ideas will arise, making your company stand out and be positioned as a leader in your particular industry.

Every company must constantly evolve to adapt to their clients' needs for new products and processes or an increase in demand. Your current production equipment layout will not adequately respond to these new requirements, and to stay competitive, you need to change. A facility layout project is one way to respond to these new situations and is also an opportunity to eliminate any kind of waste decreasing your company's performance.

BENEFITS

There are many benefits for your company:

- Decreased production time
- Less floor space required
- Reduction of waste in handling and transportation
- Reduction in operation costs
- Improvement in tidiness and cleanliness
- Increased flexibility

As soon as your goals are defined, our experts are ready to take charge of the project and coach the working team on developing your new layout.

Auger Groupe Conseil can help you:

1. Draft an operations diagram
2. Draft a diagram of material flow and identify waste
3. Define needs in terms of equipment, handling, tools, material and space
4. Carry out a KAIZEN event with the working group
5. Create plans and drawings
6. Find production and handling equipment
7. Develop work methods
8. Implement layout and work methods
9. Perform implementation follow-up
