Logistics

OUR LOGISTICS APPROACH continually enables us to understand and solve the problems that decrease operational efficiency. The performance of the production unit often depends on the supply chain.

The majority of businesses in manufacturing, commercial, institutional or other sectors must deal with complex logistics in terms of supply, delivery and sometimes distribution.

At Auger Groupe Conseil, we are able to support clients with a wide range of logistics requirements. Whether you need to transport patients in a hospital, transfer ore from a mine or supply material to a bottling line, there are always complex challenges to consider.

The smallest weakness at any point along the production chain—upstream, downstream or at the core of the service or production unit—can tremendously affect final performance. Too much material too soon is no better than having too little material too late. What you need are the right supplies, at the right time, in the right place. This may sound simple, but it requires daily organization and discipline.

Auger Groupe Conseil is able to take stock of your current situation and develop or modify your logistics system in order to optimize output. We have sophisticated analysis and support tools at our disposal, such as operations simulation models and computer-aided management and manufacturing.

Diapositive 1

A1 This is the only term I was able to find in English, but I'm not sure if this is one hundred per cent accurate in this sentence.

Amy ; 2006-08-29

A2 Amy ; 2006-08-29
